

# Atlas Plastics find materials handling solution with Labotek

OCTOBER 2007

Atlas Plastics is a leading manufacturer and supplier of rigid plastic packaging located in Minto, Sydney.

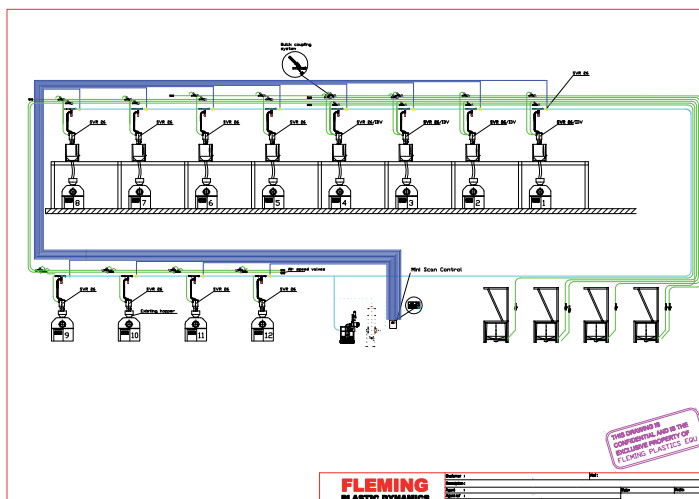

We have been dealing with Fleming Plastics Dynamics (FPD) for many years using a range of their ancillary equipment items and always found their product quality, technical advice and service to be of a very high standard. We decided to install a Labotek central materials handling system through FPD due to a number of product design advantages but also because we felt very confident with their system design expertise.

We also liked the fact the Fleming have represented Labotek in Australia for over 25 years. The installation stage was planned well resulting in very minimal production loss with completion on time. In fact the Labotek installation was the only one out of many other site installations that went exactly to plan. Since the day of commissioning and training almost 12 months ago the system has performed above expectation and delivered the expected benefits. The same can be said of the Cool-Pak water chillers, DynaCon modular conveyors and more recently the Maguire gravimetric blenders that have also been purchased through Fleming.

We could not be happier with the quality and reliability of all the equipment installed and the support from the team at FPD.
